Re Perfection Manufacturing Company
Docket No. 81-H-021

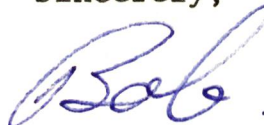

Dear Ms Micinski;

Enclosed per your request is the manifest prepared in connection with the August 27, 1981 shipment of xylene referred to in Mr. W. Buck's letter of February 22, 1982. As you can see, the shipment was delivered to the incineration facility without incident.

As I had expected when we talked on the phone, the initial tests run in April of 1981 on the caustic sludge did not distinguish between Cr III and Cr VI. The recent retesting of this material shows that all of the chromium present is Cr III and therefore not hazardous. The enclosed test results cover (a) paint sludge (drums 1-19), (b) recently generated caustic sludge (drums 1-4) and (c) old caustic sludge which has been repackaged (drums 5-6). The caustic sludge is being sent to Chemical Waste Management's land disposal facility as noted in our prior conversation.

I hope that when you return from your training program this matter can be promptly resolved since I do not want to request an additional extension of the present April 16 deadline for filing an Answer.

Sincerely,

Robert G Carr
